

## Evaporative Coolers

The manufacturing sector has the responsibility of reducing environmental impact through the adoption of sustainable manufacturing practices, such as water and energy management.

### FEATURES:

- ABCO's evaporative coolers use approximately **one third of the energy** as traditional machinery
- Minimal water usage
- Retain colour, flavour and nutrients with rapid, even cooling
- Bacteria-laden moisture – that can condense in the air ducting above the product – is eliminated with ABCO's airflow system
- Easy access for cleaning and maintenance
- All stainless steel construction
- P.L.C. controlled
- Refrigerated air option available

### MANUFACTURING STANDARDS

Certified by the Canadian Welding Bureau to Welding Standards CSA W.47.1 and CSA W.47.2.M

ABCO maintains a strict quality assurance system

ABCO acquires project related code certifications as required

**We work with you to design, build and install individual pieces of equipment, and complete integrated processing lines and control systems.**
